

# Photoshop Assignment:

*"Photo Retouching"*

This tutorial will allow you to work with/on:

- Cropping
- the Clone tool
- Selection tools
- Levels
- Layers

Before

After

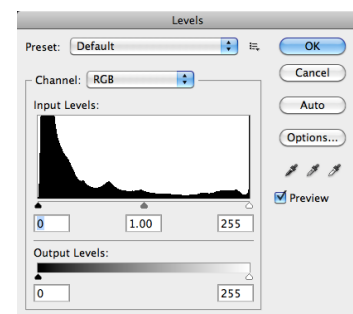

For this assignment you will be working on a photograph taken by one of my former students, Noelle Jacobs. Noelle took a nice photo of an Audi at the Auto Show, but felt there was more that could be done to enhance the photo and make it better.

Your challenge is to help Noelle take the photo from the Before to the After (as seen above).

## Outline of Steps:

1. Open the Photo Server (edc/photo) HAND\_OUT folder
2. Drag a **COPY** of the CAR\_ORIGINAL.psd onto your **desktop**.
3. **Rename** the file CAR\_LASTNAME.psd
4. **Open** the file in Photoshop
5. **Duplicate** the background layer (so you have an original) *Go to Layer > Duplicate Layer....and press OK*
6. **Crop** 
7. Adjust **Levels** 
8. **Clone** Stamp tool work 
9. **Select** and remove the background
10. **Tint** the Windshield (selection and levels)
11. Add the following information to the bottom of the photo using the Text tool:

**SAVE YOUR WORK OFTEN!**

**Photo by: Noelle Jacobs**

**Edited by: Your Name**

**Hour:**

(over)

12. **Save a Copy** of the file as a .JPG
13. Turn in the CAR\_LASTNAME.JPG to the PHOTO server HAND\_IN folder.
14. Add a new blog post explaining the project. Be sure to show off the car “Before” and “After” in the post.

The point of this assignment is to learn some basic and somewhat advanced photo editing techniques. You can now apply some of these techniques into your future photo projects.
